

Chapter 4

Implementation

Projects that support pedestrian travel occur on a continuous basis in Louisville, and involve a vast array of public agencies and private entities, including developers and property owners who initiate projects that impact the public right-of-way. The policies and design standards that are established and/or recommended in this Plan will ensure that activities of these different partners will positively impact walkability in Louisville.

This Master Plan provides a method for coordinating among the different entities that implement pedestrian projects and programs. Metro Public Works will primarily be responsible for this continued coordination, and for implementing the recommendations identified in Chapter 3. Therefore, this chapter describes a timeline for implementation and performance measures that will be used by LMPW moving forward.

To determine how the implementation of such facilities should occur, a prioritization procedure has been carried out for the pedestrian study network. The pedestrian study network is a system of roads and paths identified as the primary network for pedestrians; it was developed in part through input received at the 2008 Louisville Pedestrian Summit. The prioritization procedure is based on an estimation of demand (Latent Demand Method) for pedestrians on these network segments as well as the recommended pedestrian facility type.

Latent Demand Method:

The Latent Demand Method predicts relative potential non-motorized trips based on characteristics of trip origins and destinations and their relative proximity and concentration/dispersion. While the way the method predicts potential bicycle and pedestrian travel is the same, in the interest of clarity the following description presents only the Pedestrian mode (appendix I).

Prioritization (Benefit-Cost Index):

The facility determination process was conducted for approximately 500 segments. As Louisville Metro is interested in pedestrian projects in areas of high travel demand for the least cost, a straightforward benefit-cost index has been implemented to prioritize potential projects. This index, which is contained in the separately available prioritization list, divides the predicted post-construction number of facility users (as calculated using the latent demand procedure) by the estimated total project cost. Those segments with high benefit-cost indices would serve a relatively high number of pedestrians at a low cost to the implementing jurisdiction.

The results of the prioritization can be used to indicate where short-range projects may be most effective. Specifically, it is recommended that approximately the segments with the tier one and two indices be included in a short-range program following field verification of their feasibility. Construction of these projects within the first several years following plan adoption will allow for increased momentum for many of the remaining prioritized projects (appendix M).

The above project strategies and associated actions are only one of the three “P’s”. The other “p’s” include Policies and Programs. To identify all of the actions that are necessary to achieve these strategies and actions, the Pedestrian Master Plan includes an "Implementation Action Matrix." This matrix, or table, provides the full list of actions that address the plan's focus on programs and policies that make it easier to walk in Louisville.

In addition to organizing all of the actions that are needed, the matrix assigns an owner to each action and identifies the partners with whom the owner will need to coordinate. Milestones, or targets, are provided for each action as well; the milestones indicate the date by which portions of the program or policy are to be completed. Those actions identified in the matrix for completion by 2012 are considered near-term actions, and those identified for completion by 2015 are mid-term actions and those identified for completion by 2030 are considered longer-term actions.

The milestones also provide an easy way for Step Up Louisville to report on the progress made in implementing the plan, information that will be shared with the public, the Louisville Step Up Louisville committee, the Mayor's Office, and City Council each year.

| Pedestrian Master Plan Implementation Actions | | | | | | | | |
|---|--|---------------------|----------|--|--|--|---------------------------|------------------------|
| Numbering System | Objectives and associated strategies | IMPLEMENTATION LEAD | PARTNERS | ACTION MILESTONES FOR COMPLETION BY END OF | | | PRIMARY ACTION | ASSOCIATED ACTION TYPE |

As described in Chapter 1, this Master Plan sets forward two primary goals:

- 1. To improve and expand current pedestrian deficiencies—by preparing a capital improvement process that enables Louisville to increase the pedestrian facility network through retrofitting and expanding current deficient sidewalk and pedestrian crossing locations between 2010 and 2030;**
- 2. To simultaneously reduce the rate of pedestrian crashes between 2010 and 2030.**

The objectives and recommendations in Chapter 3 are designed to achieve these goals. In order to measure progress over time, this chapter sets forward two performance measures that will help LMPW staff, elected officials and citizens to determine if implementation activities are having the desired effect. The two performance measures are provided below in Table 4.1:

| Table 4.1 Performance Measures | Data Item | Baseline Measurement | Performance Target | Data Collection Frequency |
|---|--|---|---|---|
| Performance Measure #1 | Number of pedestrians walking and using transit buses | Household Travel Surveys, Census Data | Measureable increase annually through 2030 | Every year |
| Performance Measure #2 | Number of reported pedestrian deaths and injuries metro wide | 2004-2009 average for fatalities and injuries | Reduce pedestrian deaths and injuries by 5%, every year, adjusting for exposure | Annually, with a rolling three year average |

Performance monitoring will be led by the LMPW, Pedestrian and Bicycle Program with support from the LMPW, Policy and Planning Administration. The Pedestrian Master Plan Implementation Action table provides a general timeframe for achieving the recommendations per Chapter 3.
